

### Introduction

The CL12511IP340 Transmitter converts 24bits LVCMOS parallel data of RGB into 3-channel mini-LVDS serial data streams. A Phase-locked transmit clock is transmitter in parallel with the data streams. The CL12511IP340 transmitter is programmed for rising edge or falling edge clocks through a dedicated pin. At a transmit clock frequency of 340MHz, 24bits of RGB data are transmitted at a rate of 680Mbps per mini-LVDS data channel. The CL12511IP340 Transmitter is an ideal means to solve EMI and cable size problems associated with wide, high speed CMOS interface.
